

Abracon

Cyber-First IT That Powers Resilience and Global Growth for a High-Tech Manufacturer

About Abracon

Abracon is a global manufacturer of frequency control, timing, and connectivity components serving key industries including telecommunications, automotive, industrial, and defense. With more than 500 employees, 10 global locations, and rapid M&A activity, Abracon depends on a reliable, scalable, and **cyber-secure IT environment** to keep its teams connected and its operations moving forward.

To secure its infrastructure, enable remote collaboration, and support global expansion—including post-acquisition transitions—Abracon partners with Logically.

Why It Matters

As a modern, multinational electronics manufacturer, Abracon handles sensitive financial and employee data across distributed teams and systems. With increasing cyber threats and business complexity, the organization needed an IT partner that could do more than manage infrastructure—they needed a **cyber-first, compliance-aware partner** to protect critical systems, reduce risk, and ensure operational continuity.

We've worked with Logically through acquisitions, expansion, and even a major cyberattack. They've delivered, every time.

Tony Roybal,
VP of Global Operations, Abracon

The Challenge

In 2020, Abracon was targeted by a ransomware attack that disrupted internal systems and exposed vulnerabilities in its legacy IT environment. In response, the company needed to:

Investigate and **contain the cyber incident** quickly

Rebuild critical infrastructure and restore data securely

Modernize and consolidate systems post-acquisition

Enable a **secure remote workforce** across North America, Europe, and Asia

Reduce future risk through strategic planning and managed services

The company turned to Logically to recover, protect, and future-proof its IT operations.

The Solution

Logically deployed a **cyber-first recovery and modernization plan**, ensuring security, scalability, and continuity:

Forensic investigation and threat containment during the cyberattack

Rebuilt 20 servers and migrated systems to **Microsoft cloud infrastructure**

Implemented **firewall modernization**, secure backups, and endpoint protection

Deployed **remote collaboration platforms** with layered access control

Supported **acquisition integration**, providing a secure IT onboarding plan

Delivered **fully managed IT services**, including 24/7 monitoring, patching, and strategic planning

From full forensics to rebuilding our entire environment, Logically didn't just respond—they elevated us. We came back stronger, with better security and more visibility

Tony Roybal

Strategic Impact

- ✓ **Full operational recovery** after ransomware attack, with no lasting data loss
- ✓ **Modern cloud-first infrastructure** supporting global collaboration
- ✓ **Reduced cyber risk** through layered security and endpoint protection
- ✓ **Scalable architecture** ready for future M&A activity
- ✓ **24/7 monitoring and support** to ensure business continuity and uptime

Logically gives us peace of mind. Whether we're onboarding a new site, scaling teams, or mitigating threats—they're the strategic partner we trust.

Tony Roybal,
VP of Global Operations

Partnering for Resilient, Future-Ready Manufacturing

In electronics manufacturing, secure, efficient operations are critical to protecting intellectual property, meeting production deadlines, and maintaining quality standards. With Logically's expertise, manufacturers can enhance cybersecurity, optimize technology systems, and ensure reliable, scalable operations from design to delivery. Let's explore how we can help you build a secure, efficient, and future-ready manufacturing environment.

Future Ready

Abracon continues to expand globally and integrate new acquisitions. With Logically's cyber-first managed services and infrastructure expertise, the company is equipped to scale securely, operate confidently, and stay resilient in the face of evolving threats and complexity.

Let's Work Together to Protect What Matters Most.
