

# Churchill County, Nevada

From Fragmented to Unified – With a Cyber-First IT Foundation

## About Churchill County

Located in Fallon, Nevada, Churchill County is a dynamic municipality serving a population of approximately 25,000. With 240 employees spread across 12 buildings and 180 workstations, the county delivers vital government services and also owns and operates CC Communications—a regional telecommunications provider.

When Churchill County sought to modernize and unify its IT infrastructure, it chose Logically to lead the transformation from a fragmented, reactive support model to a centralized, security-first environment.

### Why It Matters

Government entities face increasing pressure to secure citizen data, maintain continuity across departments, and adapt to rapid shifts in technology. Churchill County needed a partner who could provide deep cybersecurity expertise, simplify IT complexity, and scale alongside the evolving needs of a public-sector organization.

## The Challenge

When Logically first engaged with Churchill County, multiple departments were operating under their own IT contracts, creating inefficiencies and exposure to risk. The county had no unified strategy, limited visibility across systems, and inconsistent support quality.

What was difficult was transitioning from a fragmented approach with separate contracts and reactive support. We knew the goal was to build a cohesive, centralized system, and Logically worked to earn that trust from every department.

**Julie Guerrero,**  
Administrative Services Manager, Churchill County

To realize the vision of a unified, serviceable environment, Churchill County committed to significant infrastructure upgrades—driven by a clear understanding of long-term operational and security value.

## The Solution

Logically deployed a cyber-first IT managed services approach tailored to the unique structure of county government and its integration with CC Communications. The partnership focused on:

**Unified IT infrastructure:** Consolidated support model across 12 county buildings and all departments

**Secure connectivity:** Leveraged CC Communications fiber network with private VLANs for inter-building traffic

**Proactive cybersecurity:** Regular guidance on evolving threat vectors, phishing defense, and layered protection strategies

**Strategic oversight:** Ongoing planning sessions to align technology investments with countywide initiatives and budgets

Logically recognized that our municipality was truly one-of-a-kind. They helped us fully realize the value of our telecom infrastructure, enabling secure connections across our buildings using private VLANs.

**Julie Guerrero,**  
Administrative Services Manager, Churchill County

## Outcomes Delivered

- ✓ Full centralization of IT support across 12 sites and 180+ workstations
- ✓ Secure inter-building connectivity via CC Communications infrastructure
- ✓ Improved risk posture with proactive security guidance and system updates
- ✓ Departmental trust established through consistent service delivery and communication
- ✓ Future-focused planning that balances innovation with fiscal responsibility

Security will remain our top priority for years to come. Logically does a fantastic job of keeping us current and helping us weigh budget decisions against the right technology for our environment.

**Julie Guerrero,**  
Administrative Services Manager, Churchill County

## Future Ready

With foundational IT modernization complete, Churchill County is preparing for the next phase: expanding its security strategy, implementing more sophisticated risk management tools, and ensuring compliance at every level.

We went in with eyes wide open, knowing we'd need to invest to build something sustainable. Logically helped us do that—and now we're ready to move forward with confidence.
