

# Environmental Partners

Cyber-First IT That Scales with Innovation and Growth

## About Environmental Partners

Environmental Partners is an award-winning, multidisciplinary engineering and consulting firm with more than 80 employees and offices across Massachusetts and Connecticut. For over 24 years, the firm has served municipalities and organizations with a reputation for technical excellence and long-term relationships.

As the company grew from a small operation to a regional leader, it became clear that secure, scalable, and expertly managed IT would be critical to enabling that expansion. That's when Environmental Partners turned to Logically.

## Why It Matters

Engineering firms like Environmental Partners manage sensitive project data, client communications, and complex technical files—often across multiple offices and remote teams. Business continuity, cybersecurity, and secure collaboration aren't just IT needs; they're foundational to protecting reputation, safeguarding client assets, and enabling growth.

## The Challenge

Before working with Logically, Environmental Partners managed their IT infrastructure using a traditional model with location-based servers and limited security scalability. As the company expanded and shifted to a hybrid work model, new challenges emerged:

Ensuring secure, reliable remote access to systems and files

Maintaining operational uptime across multiple office locations

Scaling support for a growing, distributed workforce

Anticipating and preparing for evolving cybersecurity risks

Since I began working with Logically, we've experienced tremendous growth. One of the best parts has been their ability to scale with us—from a small team to a thriving regional operation.

**Ryan Trahan,**  
Chief Operating Officer

## The Solution

Logically deployed a **cyber-first managed IT solution** tailored to Environmental Partners' evolving needs. This included:

**Secure remote workforce enablement:** VPN licensing, multi-site server architecture, and protected access to shared project files

**Talent enablement:** Provided strategic advisory and participated in hiring an internal IT resource to strengthen hybrid IT operations

**Proactive cybersecurity measures:** Routine patching, firewall enhancements, risk mitigation strategies, and user training to improve cyber hygiene

**Scalable infrastructure support:** Management of servers across four regional offices, plus recommendations for cloud migration readiness

Logically wasn't just a vendor—they sat in on interviews for our internal IT hire and helped us understand what to look for. That kind of partnership is rare.

**Ryan Trahan,**  
Chief Operating Officer

## Strategic Impact

- ✓ Enabled seamless transition to remote work during the pandemic
- ✓ Reduced risk exposure with proactive cybersecurity and layered defenses
- ✓ Supported business growth from ~25 to 80 employees with no disruption
- ✓ Improved operational resilience across multi-site infrastructure
- ✓ Planned for future scalability with cloud strategy and cyber readiness

No matter what stage your company is at, Logically delivers the services and insights to help you scale securely. Their range of capabilities is impressive—and essential.

**Ryan Trahan,**  
Chief Operating Officer

## Future Ready

With a secure foundation in place, Environmental Partners is working with Logically to evaluate a transition to cloud infrastructure—ensuring performance, availability, and security scale with the next phase of growth.

Cloud is a logical progression for us. When we make that move, Logically will lead the implementation—no question.

**Ryan Trahan,**  
Chief Operating Officer

## Partnering for Resilient, Future-Ready Engineering and Consulting

In engineering and consulting, precision, security, and operational excellence are essential to delivering high-value client outcomes. With Logically's expertise, firms can safeguard intellectual property, optimize technology systems, and ensure seamless collaboration across teams and projects. Let's explore how we can help you achieve secure, efficient, and future-ready operations that keep projects moving and clients confident.

Let's Build A Smarter, Safer Infrastructure Together.
