

### About Nuventra

**Nuventra, Inc.** is a rapidly growing pharmaceutical consulting firm specializing in clinical pharmacology and pharmacokinetics/pharmacodynamics (PK/PD). Their work enables pharmaceutical companies to design more efficient clinical trials and improve regulatory success.

Headquartered in Durham, North Carolina, with additional offices in Denver, Philadelphia, and Boston, Nuventra has earned national recognition—including six consecutive appearances on the Inc. 5000 list and multiple Fast 50 awards from the Triangle Business Journal. As their operations scaled and regulatory demands intensified, Nuventra turned to Logically for a **cyber-first IT and compliance support model** capable of evolving alongside the business.

### Why It Matters

Nuventra supports global pharmaceutical clients with high-stakes deliverables that rely on **real-time data access, 24/7 system uptime, and ironclad information security**. Downtime or vulnerabilities aren't just inconvenient—they can disrupt client studies and compromise regulatory trust.

Operating in a GxP-regulated environment, Nuventra must meet strict cybersecurity and compliance standards to protect intellectual property and sensitive clinical data. To meet these demands while scaling, they needed an IT partner that could **go beyond helpdesk support—and deliver strategic resilience**.

Logically has always provided the guidance and expertise to help me succeed. Their team acts like an extension of ours.

**Michael Faas,**  
Director of IT, Nuventra

### The Challenge

As Nuventra's team approached 120+ employees with aggressive hiring goals, the company needed a partner to:

**Maintain 24/7 uptime and rapid-response support** for cloud-hosted clinical systems

**Migrate infrastructure to the cloud** while meeting evolving cybersecurity requirements

**Enable secure remote work** across multiple offices and locations

**Ensure ongoing compliance** with data protection standards required by Nuventra's pharma clients

**Protect endpoints and data as staff became more mobile**

A legacy VPN issue once disrupted user access—underscoring the need for an MSP with deep cybersecurity expertise and enterprise-grade responsiveness.

## The Solution

Logically delivered a **cyber-first managed IT and security strategy** that continues to evolve with Nuventra's scale and regulatory complexity:

-  **Cloud hosting and infrastructure management** for all mission-critical systems
-  **Proactive endpoint protection**, patching, and monitoring
-  **24/7 security operations support**, with real-time incident response and remediation
-  **Secure Cisco VPN deployment** for reliable, encrypted remote access

-  **Compliance advisory** to meet pharma client requirements and align with GxP practices
-  **Roadmap for endpoint encryption** and migration to advanced anti-virus platforms

If something happens at 3:00 a.m., Logically already knows. That helps me sleep at night.

**Michael Faas**

## Strategic Impact

-  **99% Windows environment secured and monitored by Logically's cyber-first stack**
-  **Full cloud migration achieved with enhanced uptime and data availability**
-  **Enabled hybrid workforce** across four sites with secure VPN and Microsoft Teams
-  **Demonstrated compliance posture** to meet demanding pharmaceutical client requirements
-  **On-track hiring and onboarding of 200+ staff** with tech-enabled productivity from day one

## Partnering for Resilient, Future-Ready Pharmaceutical

In pharmaceutical consulting, safeguarding sensitive research data, ensuring regulatory compliance, and maintaining operational efficiency are critical to client success. With Logically's expertise, firms can enhance cybersecurity, streamline collaboration, and support scalable, compliant operations—empowering teams to deliver trusted guidance from discovery to market. Let's explore how we can help you build secure, efficient, and future-ready consulting capabilities.

## Future Ready

As Nuventra accelerates its hiring plans and expands its client base, Logically continues to provide strategic technology guidance, cloud scale, and layered security. Together, they are building a resilient infrastructure that empowers scientific innovation without compromise.

**Engineered for Today. Ready for What's Next.**
