

LogicAI

Secure, Governed AI, Without Shadow Risk

Enable AI innovation across your organization, without sacrificing security, compliance, or intellectual property.

EXECUTIVE SNAPSHOT

What It Is

LogicAI is a system of record for AI usage in your organization combining standardized access, governance, visibility, and enablement in one secure platform.

What It Replaces

Unmanaged public AI usage across tools like ChatGPT, Claude, and Grok, often without authorization, oversight, or safeguards.

What You Gain

A private, auditable AI tenant owned by your organization, so employees can use AI effectively while IT and security retain control.

THE CHALLENGE

AI adoption is accelerating faster than governance can keep up.

Today, employees are using public AI platforms often without authorization, oversight, or consistent safeguards. This creates **shadow AI** and unmanaged **AI sprawl**, where usage grows faster than IT can control.

The risk isn't theoretical. It's already happening:

Data leakage and IP loss

Compliance exposure

Little to no visibility into how AI is used

Knowledge walking out the door when employees leave

Dozens of unapproved AI accounts, each with its own risk profile

Important:

AI bans don't stop usage. They drive it underground. The organizations that win in today's marketplace won't block AI, they'll **standardize and govern it**.

THE IMPACT IF NOTHING CHANGES

Without secure AI governance, organizations face:

Unmonitored sharing of sensitive data

Loss of institutional knowledge embedded in personal AI accounts

Increased audit and regulatory risk

Fragmented experimentation with no ownership, accountability, or ROI

Rapid vendor sprawl across dozens of AI platforms and logins

When AI is unmanaged, it becomes a liability rather than a strategic advantage.

THE SOLUTION: LOGICAI

LogicAI replaces unmanaged public AI usage with a **governed, auditable environment** owned by your organization. It gives employees what they want—AI that actually works—while giving IT and security teams the control they need.

Built for security-first enablement:

Built on enterprise-grade infrastructure

Managed by Logically's cyber-first experts

Provides a **private AI tenant** where activity is visible, auditable, and securely retained

No prompts. No outputs. No workflows are ever used to train public models.

WHO IT'S FOR

LogicAI is designed for organizations that want:

One sanctioned AI platform instead of dozens of unmanaged tools

Clear ownership of AI-generated knowledge and outcomes

Audit-ready governance without blocking innovation

A practical path from experimentation to operational AI

Control and visibility that scales as adoption grows

If your organization is asking, "How do we enable AI safely and consistently?" LogicAI is built for that decision.

WHAT YOU GET WITH LOGICAI

✓ Standardized AI Access With Governance Built In

- Private tenant with full data isolation
- SOC 2 Type II-certified architecture
- Encryption at rest and in transit
- Entra ID single sign-on and role-based access controls

✓ Visibility & Control (Your AI Control Plane)

- Centralized oversight of AI usage across the organization
- Compliance logging and traceability
- Adoption analytics and usage trend intelligence
- Clear governance without slowing innovation

✓ One Governed Platform, Multiple Approved Models

- Access to multiple leading AI models in one secure environment
- Approved model routing based on task needs, without separate vendor accounts
- Reduced vendor sprawl and simplified oversight

✓ Secure Automation & Integration

- Build AI workflows, apps, and assistants inside your tenant
- Automate RFPs, HR forms, data summarization, and ticket triage
- Integrate with CRM, ERP, PSA, HRIS, and other systems

✓ Institutional Knowledge Ownership & Retention

- AI-generated knowledge stays with the organization
- Prompts, outputs, workflows, and assets remain protected, even when employees leave
- Supports durable organizational learning, not individual tool reliance

ADOPTION THAT ACTUALLY WORKS

LogicAI includes a tiered adoption model—because AI success depends on enablement, not just access.

LogicAI Lite includes

- ✓ Private AI tenant with secure access
- ✓ Shadow AI Assessment and visibility baseline
- ✓ Access to multiple approved AI models
- ✓ Onboarding and setup
- ✓ Self-paced foundational AI guidance
- ✓ Access to expert office hours

Available add-on services

- ✓ Additional AI usage credits

LogicAI Pro includes

- ✓ Includes everything in LogicAI Lite
- ✓ Enhanced onboarding and live enablement
- ✓ Monthly office hours with AI specialists
- ✓ Guided business use-case development
- ✓ Role-based access and governance controls
- ✓ Usage monitoring and adoption reporting

Available add-on services

- ✓ TechSkills role-based AI training
- ✓ Shadow AI blocking with Cisco Umbrella
- ✓ Advanced workflow and automation enablement

This turns AI from experimentation into a durable business capability.

Your Clear, Confident Next Step

Adopt LogicAI with clarity and confidence. Most organizations start with the **Shadow AI Assessment** to understand existing exposure and guide their LogicAI rollout.
