

PRIVILEGED ACCESS MANAGEMENT Secure. Simplify. Control.

Privileged Access Management delivers secure, auditable control over administrative privileges without disrupting productivity, reducing cyber risk while simplifying endpoint operations.

EXECUTIVE SNAPSHOT

What It Is

A fully managed privileged access framework that replaces standing admin rights with rule-based, time-limited elevation.

What It Replaces

Persistent local administrator accounts and manual approval processes.

What You Gain

Reduced attack surface, improved compliance visibility, and lower IT friction.

THE CHALLENGE

Administrative privileges remain one of the most exploited attack vectors in modern environments.

Common challenges include:

Standing local admin rights on endpoints

Excessive privilege sprawl across users and service accounts

Manual, disruptive approval processes

Limited auditability and visibility

Increased insider threat and ransomware risk

These issues grow as environments scale and compliance pressure increases.

THE IMPACT IF NOTHING CHANGES

Without proper privileged access controls, organizations face:

Expanded attack surface for malware and ransomware

Increased lateral movement risk

Failed audits or compliance findings

Higher operational burden on IT teams

Slower response times for legitimate user needs

Unchecked privilege misuse creates risk across the entire environment.

THE SOLUTION: PRIVILEGED ACCESS MANAGEMENT

Privileged Access Management provides centralized, auditable control of administrative privileges across endpoints.

Key capabilities include:

Removal of standing local administrator rights

Rule-based, time-limited elevation workflows

Automated approvals for known safe applications

Continuous monitoring and reporting

The result is stronger security, improved compliance, and uninterrupted productivity.

WHO IT'S FOR visit www.logically.com to learn more.

Ideal for organizations that:

Are security-minded or concerned about ransomware

Operate in regulated environments

Support lean or overstretched IT teams

Need audit visibility into privilege usage

Want to reduce endpoint risk without slowing users

Applicable across industries, with particular value for compliance-driven organizations.

WHAT YOU GET

Core capabilities:

- ✓ Privilege request and elevation management
- ✓ Baseline policy design and enforcement
- ✓ Monthly reporting
- ✓ Platform patching and version management
- ✓ Continuous platform health monitoring
- ✓ Dedicated escalation path through Logically Operations

Advanced Enhancements

- ✓ Just-in-time elevation
- ✓ Application blocking
- ✓ Behavioral analytics on elevation patterns
- ✓ Proactive rule optimization recommendations

Secure and support your business today, solve for tomorrow, and strategize for the future with cyber-first solutions from Logically. Our team of experts, including cybersecurity, engineering, networking, and cloud specialists, collaborate with you to implement solutions that protect your assets, reduce risk, and optimize performance, end to end.
