

# Your Single Source For Expert Cybersecurity

Solution Design and Management

## LOGICALLY'S CYBERSECURITY PRACTICE

Logically's Cybersecurity Practice specializes in being the best outsourced security team that takes the burden of IT complexity from your hands so that you can focus on what you do best. For over 15 years, we have managed and secured networks across the U.S. Once a Logically customer, you can fully focus on your business and let our team of experts keep your organization safe and protected.

## WHO IT'S FOR

CIOs, CISOs, and IT Leaders facing modern security threats

Mid-market organizations with lean staff or rising cyber insurance requirements

Heavily targeted sectors: healthcare, financial services, manufacturing, education, and government

## ACHIEVE ENTERPRISE PROTECTION WITH LOGICALLY

### Protection

Monitoring		<b>Managed Endpoint</b> We combine artificial intelligence security tools with our expert management to ensure your endpoint protection is optimized for your specific environment.
		<b>Managed Wireless</b> Our team of experts has the knowledge and technical skills to deploy secure wireless solutions in nearly every environment. We work with you to design a solution that fits your current and future needs.
		<b>SentryXDR</b> The SentryXDR Platform is equipped with powerful AI and Machine Learning driven SIEM technology. Combined with our experienced SOC analysts, you'll receive only the most relevant and actionable alerts in real-time.
		<b>Security Assessments</b> Our suite of Security Assessment service provides expert review of vital security infrastructure, risk visibility and actionable recommendations to mitigate risks.
		<b>Managed Firewall</b> We believe we're the best managed firewall solution for any company, in any location. We ensure your business' safety with highly-trained and certified technology professionals, top-tier devices, and 24/7 support.
		<b>Email Security</b> Effective threat protection starts with accurate detection. Our email security solution uses multiple layers of technology to accurately detect threats, including malicious content and malware.
		<b>Secure Remote Access</b> BYOD networks and remote employees are only becoming more common. We help expand clients' security perimeters to account for the evolving work environment.
Response		

### USE CASE SNAPSHOT

A mid-market retail chain with distributed locations turned to Logically after a failed cyber insurance renewal flagged gaps in endpoint protection and response.

Logically deployed AI-based threat prevention across 300+ endpoints and onboarded the environment into 24/7 SOC monitoring within five days. During the first week, SentryXDR detected and blocked lateral movement attempts tied to a credential-stuffing botnet—containing the threat before any customer or payment data was impacted.

#### Result:

- ✓ Prevented breach before data exfiltration occurred
- ✓ Met cyber insurer's requirements within one renewal cycle
- ✓ Centralized endpoint protection across all retail locations

### WHY LOGICALLY?

There's no silver bullet to maintaining security - that's why we focus on prevention.

Many companies suffer from data breaches due to gaps in skills, staffing and budget and Logically's Cybersecurity Practice has successfully bridged those gaps for our clients.

We investigate your overall security posture, from firewalls to endpoints and compliance requirements to deliver solutions that give you visibility, clarity and peace of mind.

Logically. Cyber-First. Future Ready.
